## 1. INTRODUCTION

Master View, a controller for single user to multiple computers. Before, the costly network is the only solution to this application. Now, the Master View provides the easiest and the most cost effective way of accessing multiple computers.

With the powerful features of Master View, anyone is capable of operating or testing lots of computers by a set of monitor, keyboard and mouse. Switching from one computer to the other is easily done by Hot Keys or button pressing. No program to install and no incompatibility problem, because the Master View intercepts the Hot Keys from the keyboard directly.

One Master View controls up to six computers. Once cascaded, Master View may control up to 216 computers. A powerful auto-scan feature scans all operational computers one by one and stops upon user requests. Master View is ideal for Server, Control Room, Testing, etc.

## FEATURES

- Supports SVGA, VGA, and Mutisync Monitors.
- Simple keystrokes or Push Buttons for PC Selection.
- Buzzer Sound for Switching Confirmation.
- No Software Required.
- One Set of Monitor, Keyboard and Mouse for up to 216 PCs.
- Cascadable up to 216 PCs.
- Auto Scan and Manual Selection.
- Keyboard Caps Lock, Num Lock, Scroll Lock states automatically saved and restored when switching among computers.
- Scan mode automatically switches through power-on computers, scan rate is DIP switch selectable.
- Saves spaces, equipments, and power costs.
- Easy Hot Keys control is compatible with normal keyboard operation.

## 2. SPECIFICATION

| Function            | Specification                   |
|---------------------|---------------------------------|
| Power Consumption   | DC 9V 450mA                     |
| Accessing PC Number | 6                               |
| PC Selected by      | Keyboard/Button                 |
| LED                 | 1 Ready LED, 6 Port Status LEDs |
| Scan Interval       | 3, 10, 20, and 40 Seconds       |
| Keyboard Connector  | 5-pin DIN                       |
| Mouse Connector     | 9-pin D Type Male/Female        |
| Monitor Connector   | 15-pin D Type Female/Male       |
| Enclosure           | Metal                           |
| Weight              | 2650g                           |
| Dimensions (LxWxH)  | 254 x 180 x 82 (mm)             |

### 3. INSTALLATION

CS-106 is cascable up to three stages by DIP switch selection.

#### 1. One Stage:

It enables one CS-106 to control up to six computers, as shown in fig A.

Set the DIP switch 4 to ON. Connect the monitor output, mouse port, and keyboard port of a computer to one of the CS-106's PC1 ~ PC6 ports by appropriate cables.

Fig A.

#### 2. Two Stages:

It enables one (the first stage) CS-106 to control computers directly or by other cascaded (the second stage) CS-106s indirectly as shown in fig B. The maximum number of computers under control is 36.

Set the DIP switch 4 of the first stage CS-106 to ON and all the second stage CS-106's OFF.

Fig B.

Computers may be connected to the first stage and the second stage CS-106s. Connect the MONITOR, MOUSE, and KBD ports of the second stage CS-106 to one of the first stage CS-106's PC1 ~ PC6 ports by appropriate cables.

### 3. Three Stages:

Similar to the **Two Stages** operation, more computers can be controlled indirectly by the third stage CS-106s as shown in fig C. The maximum number of computers under control is 216.

Set the DIP switch 4 of the first stage CS-106 to ON, and all the second stage and the third stage CS-106s' to OFF.

Computers may be connected to the first stage, the second, or the third stage CS-106s. Connect the MONITOR, MOUSE, and KBD port of the third stage CS-106 to one of the second stage CS-106's PC1 - PC6 ports by appropriate cables. Likewise, from the second stage CS-106 to the first stage CS-106.

After connecting cables from computers to CS-106 and from one CS-106 to the other, you may connect a power adapter to each CS-106 and turn on the Master View. The READY LED should be on when a Master View turns on, if not, check the power adapter.

Fig C.

## 4. OPERATION

You may access any computer by pressing the front panel SELECT BUTTON or the keyboard, and the CS-106 directs keyboard control, mouse control, and video image of that computer to you as if the computer were right next to you.

### 1. By the front panel button:

To select a computer connecting to a CS-106, you simply press the front panel SELECT BUTTON of that CS-106 several times till the computer is selected when its corresponding LED turns on.

### 2. By the keyboard:

As shown below, Hot Keys are entered by pressing the 'Alt', 'Ctrl', and 'Shift' key simultaneously, release all, followed by the commands key(s), and end with the 'Enter' key.

#### A. To start Scan mode:

**Alt** **Ctrl** **Shift** + **0** + **Enter**

#### To stop Scan mode:

**Space**

#### B. To start Previous/Next mode:

**Alt** **Ctrl** **Shift** + **9** + **Enter**

To select previous port in Previous/Next mode:

*left* **Shift**

To select next port in Previous/Next mode:

*right* **Shift**

To stop Previous/Next mode:

**Space**

#### C. To select a first-stage port directly:

**Alt** **Ctrl** **Shift** # **Enter**

To select a second-stage port directly:

**Alt** **Ctrl** **Shift** # # **Enter**

the 1st # selects a 1st-stage port

the 2nd # selects a 2nd-stage port

To select a third-stage port directly:

**Alt** **Ctrl** **Shift** # # # **Enter**

the 1st # selects a 1st-stage port

the 2nd # selects a 2nd-stage port

the 3rd # selects a 3rd-stage port

# is a digit key between 1 and 6

| Mode          | Actions taken by the CS-106   | Incorrect Hot Keys |
|---------------|---|--------------------|
| Scan          | <b>Result for correct Hot Keys</b> <ul style="list-style-type: none"> <li>filters out the Hot Keys &amp; beeps once</li> <li>scans powered-on computers one by one and flashes corresponding LED</li> <li>scam rate is set by the DIP switches of the 1st stage CS-106</li> <li><b>Space</b> stops this mode</li> </ul> | displays the keys  |
| Previous/Next | <ul style="list-style-type: none"> <li>filters out the Hot Keys &amp; beeps once</li> <li>the right <b>Shift</b> key selects a higher numbered computer</li> <li>the left <b>Shift</b> key selects a lower numbered computer</li> <li><b>Space</b> stops this mode</li> </ul>   | displays the keys  |
| Direct        | <ul style="list-style-type: none"> <li>Filters out the Hot Keys &amp; beeps once for a ready port; otherwise, beeps twice.</li> <li>switch to the selected port</li> </ul>  | displays the keys  |

## 5. LED

There are one READY LED, six PORT STATUS LEDs on the front panel. Their functions are:

READY LED : Turns on when CS-106 has power.

PORT STATUS LED : Are used to indicate various CS-106 status.

- If a port of a CS-106 is not selected, its corresponding PORT STATUS LED is off.
- If a port is selected which connects to another CS-106, its corresponding PORT STATUS LED **flashes**  

- If a port is selected which connects to a computer, its corresponding PORT STATUS LED stays on.  

- If a port is selected which connects to a computer under +/- mode, its corresponding PORT STATUS LED flashes:  

- If a port is selected which connects to a computer under scan mode, its corresponding PORT STATUS LED flashes:  

### The PORT STATUS

 : the PORT STATUS LED turns on.

 : the PORT STATUS LED turns off

## 6. DIP SWITCH

1. For the first-stage \*CS-106.

| DIP Switch Number |     |   |    | Function   |
|-------------------|-----|---|----|------------|
| 1                 | 2   | 3 | 4  | Scan Time  |
| ON                | ON  | X | ON | 3 seconds  |
| OFF               | ON  | X | ON | 10 seconds |
| ON                | OFF | X | ON | 20 seconds |
| OFF               | OFF | X | ON | 40 seconds |

2. For the second or third-stage CS-106 all DIP switches are off.

- \* The CS-106 connecting to a user keyboard is a first stage CS-106

## 7. TROUBLESHOOTING

| Symptom  | Causes  | To do   |
|--|---|---|
| The first stage CS-106 does not take Hot Keys. | Incorrect DIP switches settings.                    | Set the first stage CS-106 DIP switch 4 to ON, all other CS-106s' switches OFF. |
| Press Hot Keys gets no response.               | CS-106 operates in Scan or in Previous/Next mode.   | Press the space bar to exit these modes before giving Hot Key commands.         |
|  | The selected port connects to a power-off computer. | Change the port selection to a power-on computer.                               |
|  | Improper keyboard reset                             | Unplug then plug the keyboard back to the connector.                            |
| Improper CS-106 reset.                         |   | Turn off all CS-106s, wait for 5 seconds, and turn them on.                     |
|  |   | Turn off all computers, wait for 5 seconds, and turn them on.                   |
